

# Hi! I'm Munirat Adeshina.

I'm a UX designer based in Lagos. I'm passionate about meeting new people, collaborating and shaping ideas into reality.

Check my Resume

## UI/UX DESIGNER

I'm a user interface and user experience designer. I design and build web applications. I currently work at Arnergy solar limited.

## FRONT-END DEVELOPER

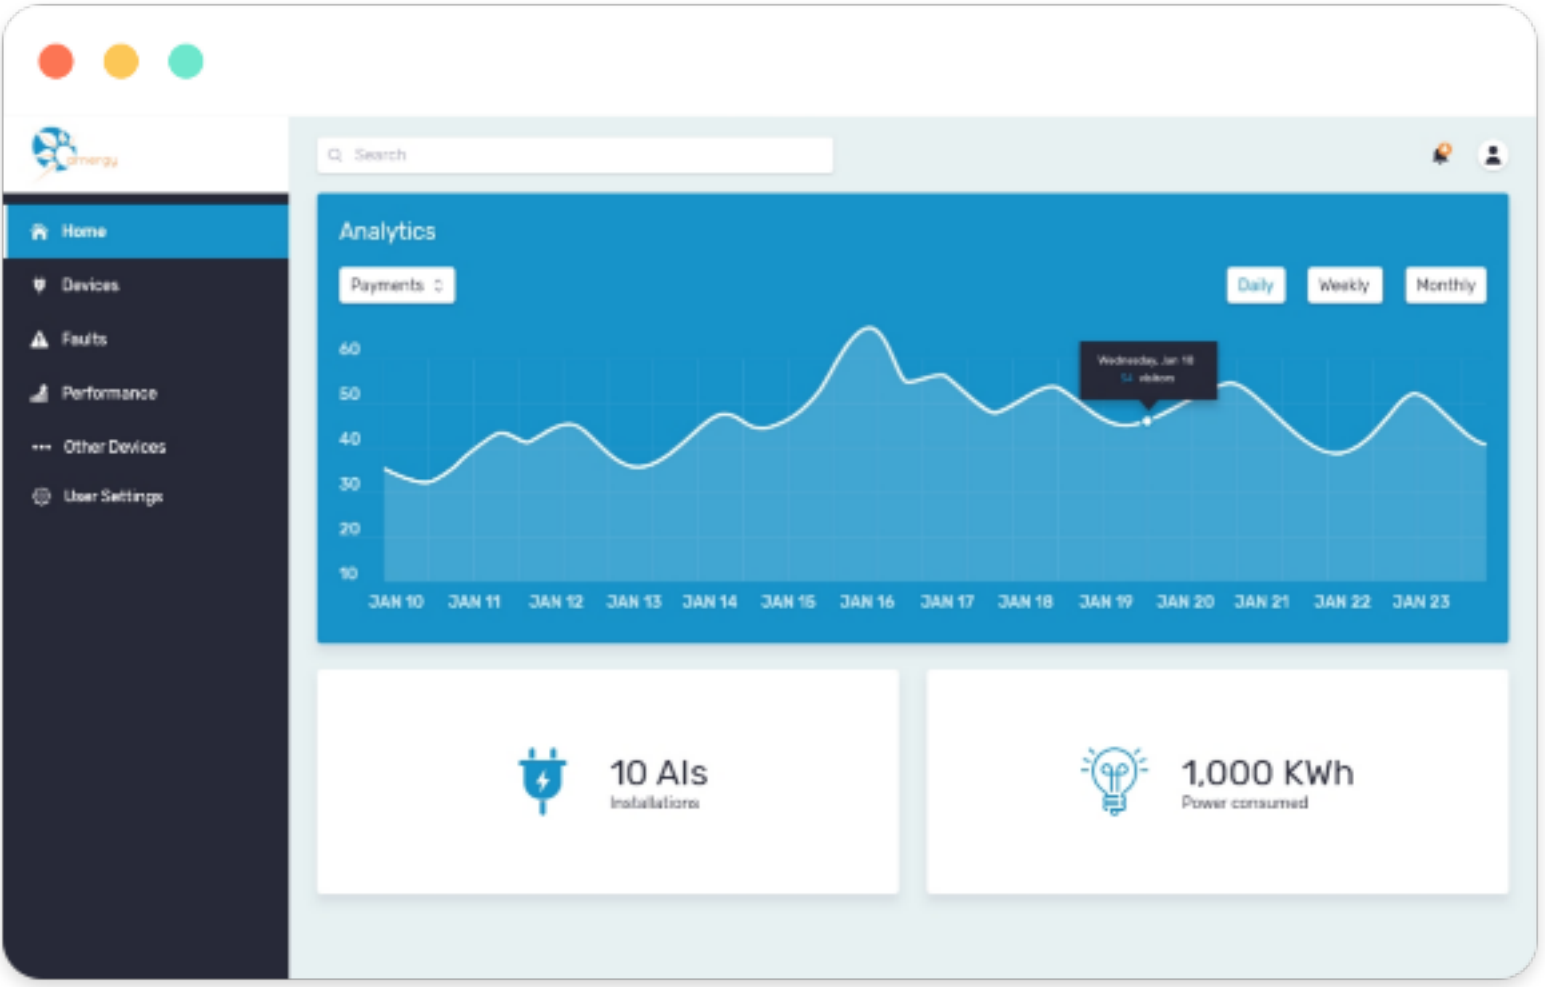

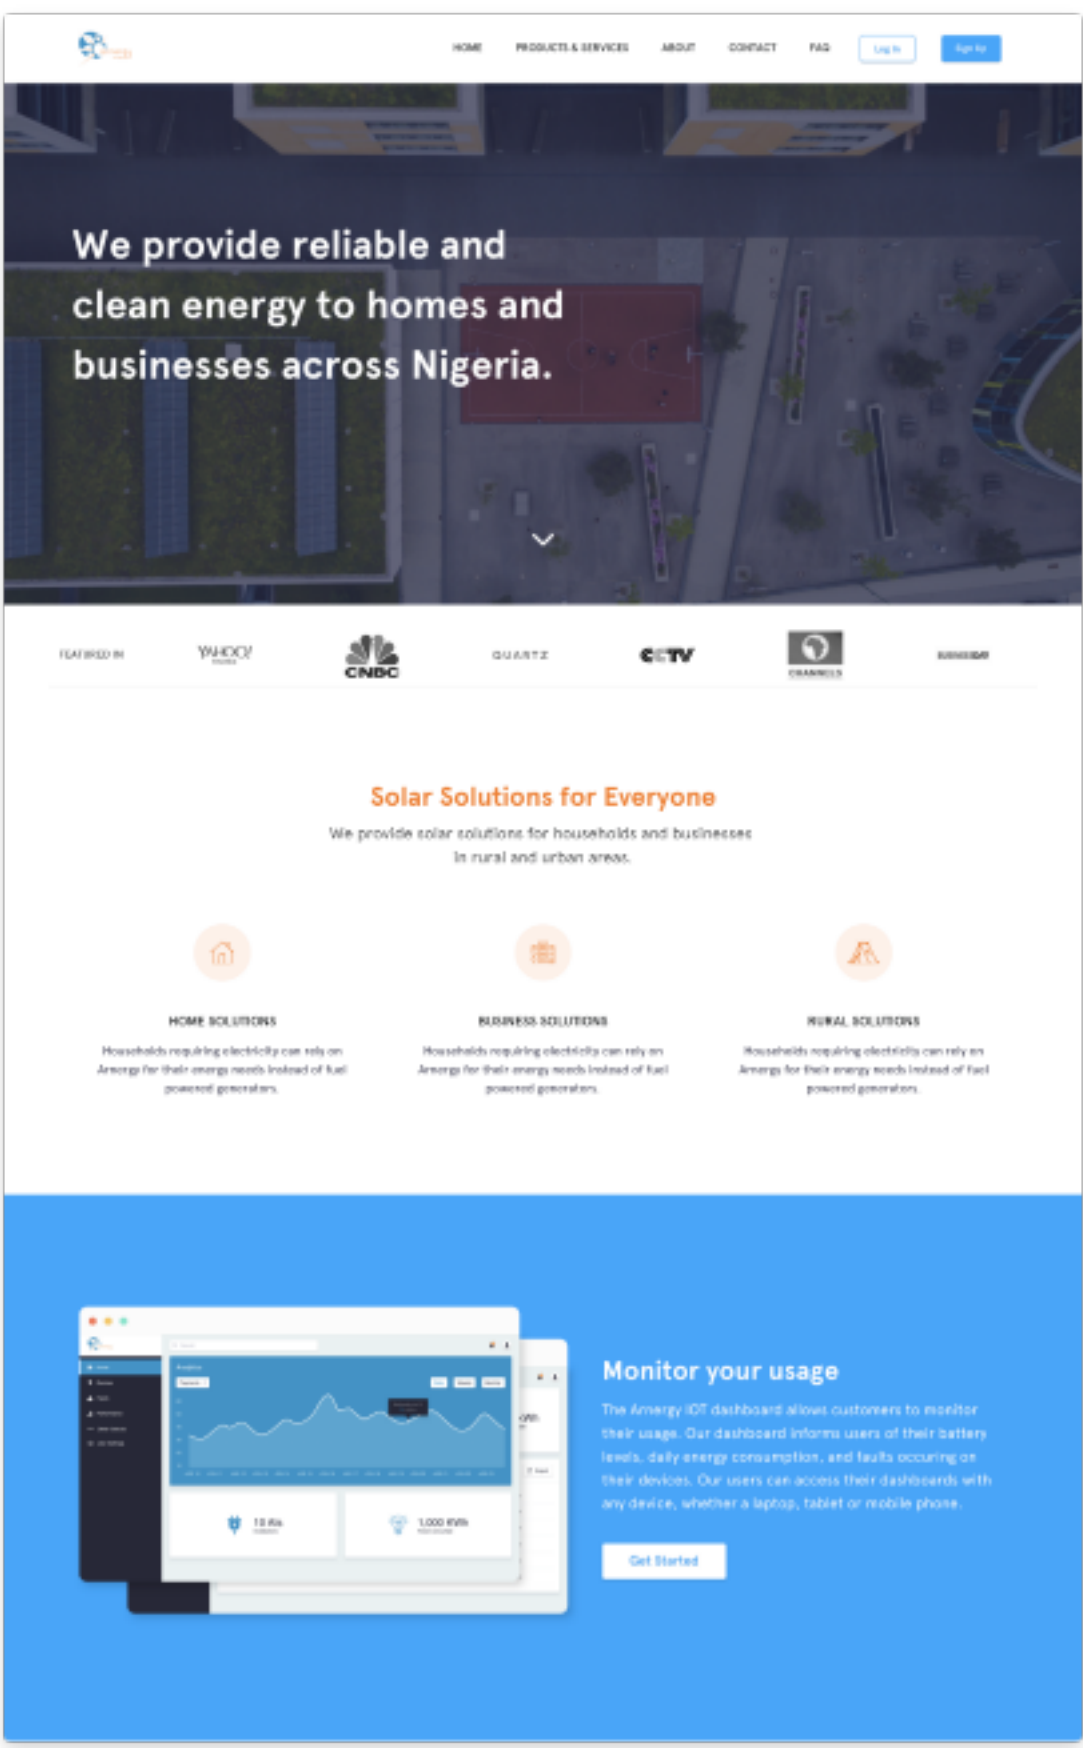

I recently learnt how to use a few programming language because i figured it would be cool to implement my own designs using modern HTML, CSS and basic Javascript.

## Works

### ARNERGY

Design, Front-End Development

I designed the Arnergys website using the adobe xd tool, and i developed the landing page using a combination of [HTML](#) and [CSS](#). The website is divided into different parts - The Product & Services page, The Contact Us page, The About page, The FAQ page, The login and Sign up page. The key aspect to the design was to create a more accessible and simple experience for the users. It was also very important to attract more users to the market to enhance the use of Solar panels in Nigeria.

### ARNERGY IOT DASHBOARD

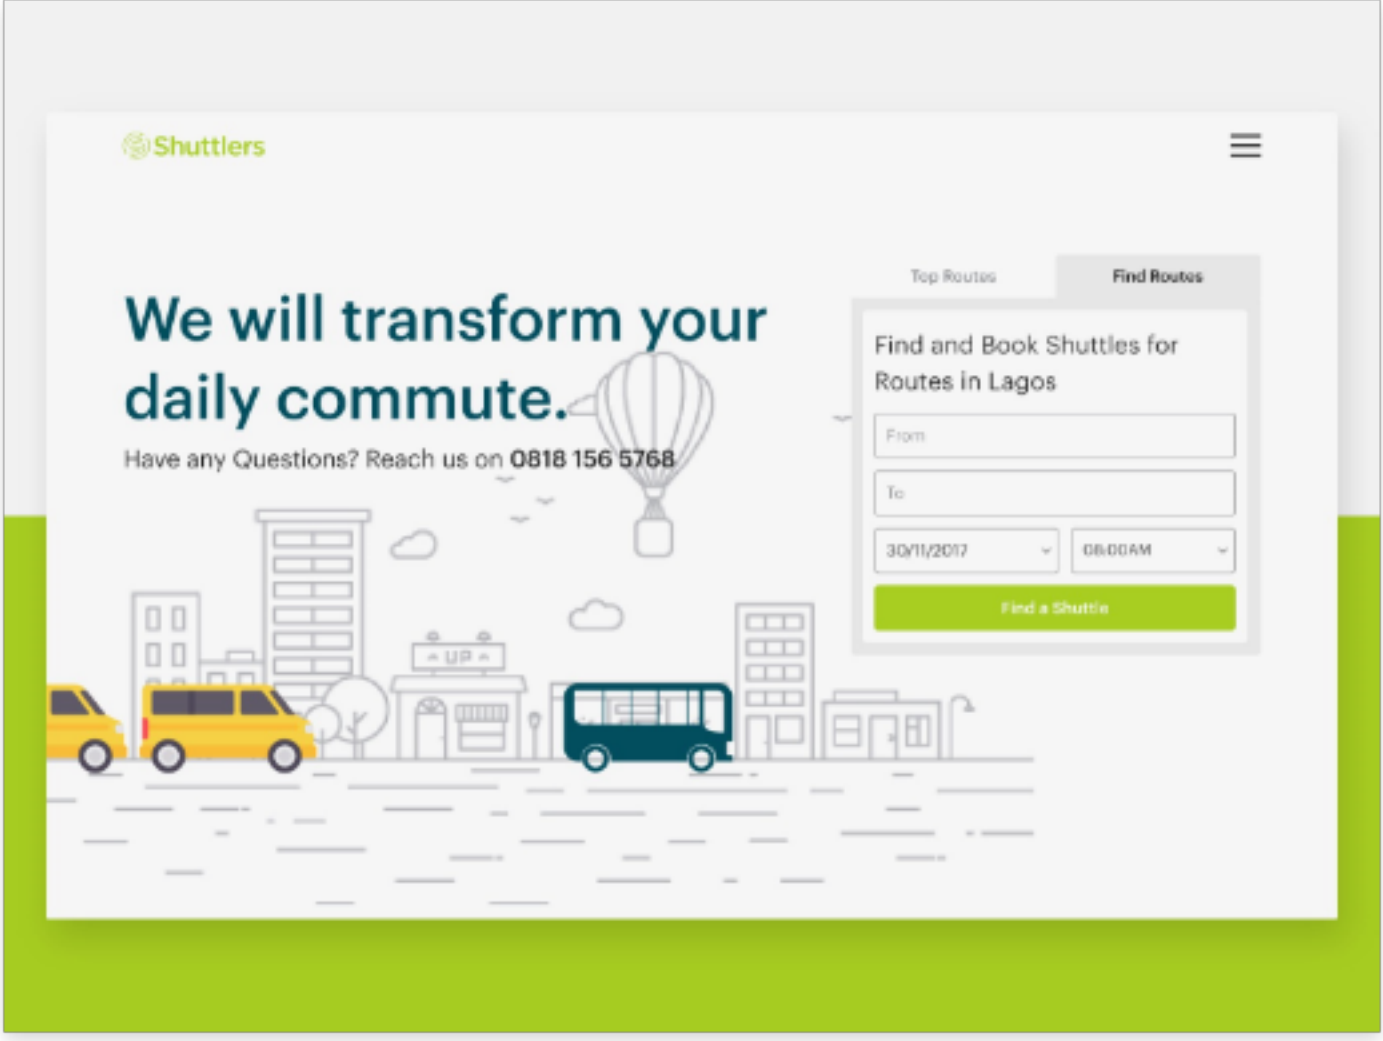

Design

This is the Customers IOT Dashboard designed to monitor the usage of their solar panels. The brief i was given was to design a mock-up of a dashboard page that informs the users of their battery levels, daily energy consumption and the faults occurring on their devices. The Customer also has access to view their payments and installations on a day to day basis.

### SHUTTLERS

Design

This was a design i took part in which was a group project during the Stutern Graduate Accelerator program. Shuttlers is a platform that allows professionals, companies, fun-seekers access a comfortable and easy transportation to & from work around city through bus-pooling. The requirements for the website included: Finding shuttles, Booking shuttles, Departure, Arrival, Date and time.
